Digital Patroller®

MOBILE DIGITAL VIDEO

**DP-2:
The next generation
in mobile video
technology.**

New Features!

4-camera
Simultaneous Recording

Higher Resolution
Selectable Camera
Configurations

More Audio Inputs

Detailed Auditing & Reporting

"Some of the other companies were dabbling in digital, but the technology just wasn't there yet. We're thrilled with our DigitalPatroller units, and plan to continue ordering until our entire fleet is outfitted."

Corporal Shad Edwards

"It's about time that a company listened to the needs of Public Safety."

Deputy Chief James Burns

According to the International Association of Chiefs of Police,*

It is no exaggeration to conclude that CCTV technology has had a significant impact on law enforcement:

- ✓ Fewer frivolous lawsuits because defendants are unable to contradict taped evidence
- ✓ Fewer officers necessary to conduct surveillance of public areas
- ✓ Protection against claims of abuse or coercion during interrogation procedures
- ✓ Reduced court time for officers because defendants are unwilling to dispute charges when faced with taped evidence

From routine car stops to event management and response, there's no substitute for ruggedized, digital video optimized for tough mobile environments. DigitalPatroller's heritage is exclusively in the mobile digital arena. Our mobile video products have been designed from the ground up to be the best in the world today, earning DigitalPatroller a solid reputation as the toughest, most dependable digital video system on the market.

- ✓ Powerful feature set
- ✓ Ultra-rugged construction
- ✓ Easy to install and use
- ✓ Fully scalable for small or large fleets

**IACP's Cutting Edge of Technology Executive Brief:
The Use of CCTV/Video Cameras in Law Enforcement*

**DigitalPatroller:
Officer's Choice**

“DigitalPatroller was the only system out there that could handle the extreme vibrations inside our helicopters.”

Officer Brian Phelt

“With the hands-off transfer of data, we don’t have to worry about something getting dropped, lost or damaged. The evidence is completely secure.”

Chief Chuck Dowell

Key Features

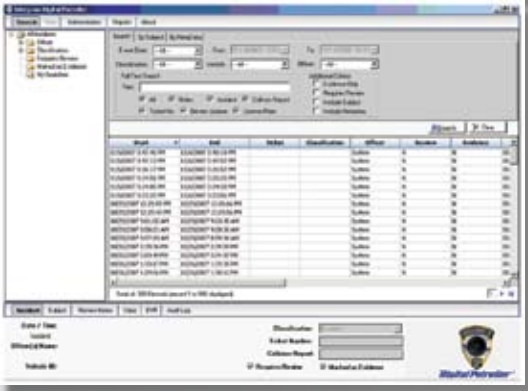

- ✓ Four-camera simultaneous recording, for maximum coverage
- ✓ Four audio inputs for simultaneous recording
- ✓ MPEG 4 ASP for more video storage
- ✓ Live remote viewing capability over wired and wireless networks
- ✓ “Active” wireless transmission for full remote functionality
- ✓ Optional redundant fixed drives for maximum data protection
- ✓ Data transfer via GB Ethernet wired, wireless transmission or removable HDD
- ✓ Small footprint for flexible installation
- ✓ Configurable resolution from 320 x 240 up to 720 x 480
- ✓ Remote triggering digital RF microphone
- ✓ Records GPS location, date/time, unit ID, radar information and more
- ✓ Easy installation: Storage blade can be removed and installed without re-cabling

Wireless Microphone

The last thing an officer wants to think about during an incident may be the first thing the D.A. asks for. Audio evidence is every bit as crucial as visual evidence. The wireless microphone is built to synchronize perfectly with the DigitalPatroller MDVR, and is fully automated for maximum performance with minimal officer interaction.

- ✓ Compact size
- ✓ Rugged & lightweight
- ✓ Built-in microphone - no wires
- ✓ Any transmitter syncs with any receiver
- ✓ Automatically triggers DigitalPatroller DVR into “record” mode
- ✓ Auto-talk feature with long range transmit
- ✓ Fast battery recharge

DP-2 Search

Data Storage and Retrieval

This is where analog and digital systems part company.

Digital systems give you near-instant access to whatever type of information you need to retrieve, in a format that is durable, secure and tamper-resistant. Video data can be viewed, searched for and retrieved using a number of user-defined criteria, such as GPS location, radar speed, officer ID, incident ID, stop type and more.

DigitalPatroller's data management system performs a number of functions, and configurable settings give you total control of your database.

- ✓ Easy to use
- ✓ Powerful feature set
- ✓ Accurate audit trail
- ✓ Reports & advanced queries
- ✓ One-click video playback

DP-2 View

File Management

Superior file management means no more lost or damaged recordings. Easily access video data for court proceedings, investigations, training or routine management.

Video Player

Play back audio and video in conjunction with the complete range of supplementary data and vehicle system status indicators. All recorded data is logically displayed on one screen for quick access to critical event information.

Video Transfer

Quickly output DigitalPatroller files to television, videotape, CD or DVD for external use. Display any combination of on-screen overlays featuring supplementary and system status data.

Digital Patroller®

Data Storage and Transfer Options

MOBILE DIGITAL VIDEO

No two departments are the same. Integrian offers an array of data storage and transfer options for agencies of all types and sizes.

Storage Options*

	Description	Advantages	Best For
Single	Single drive storage	Base Model/High capacity	Standard public safety applications
Dual Hard Drive	Raid1 Dual Hard Drives	Redundant Hard Drives	Applications where data backup is critical
Solid State Hard Drive	Stress-tolerant hard drive	No moving parts: extremely rugged	Motorcycles, Helicopters, Boats, other high vibration vehicles

*Storage options are interchangeable without replacing the unit. Simply slide out the storage blade and replace with a new one.

Video Transfer Methods

	Description	Advantages	Best For
Wired	DigitalPatroller docking station	Fastest transfer method	Larger departments and fleets where several cars may be downloading at one time
Wireless	Transfer via wireless access point	Easy, convenient	Smaller departments, where not many cars download at one time
Removable	Removable hard disk drive caddy with USB interface	Convenient / instant; no waiting for data to download	Offers another option for fast, easy download

“DigitalPatroller met and exceeded all of our expectations!”

Captain Vince Dauro

“They will help keep our officers safe . . . the cameras will help demonstrate that we do our job professionally.”

Chief David Kunkle

- ✓ View Video
- ✓ Hear Audio
- ✓ Playback Video
- ✓ Zoom In/Out
- ✓ Switch Cameras
- ✓ Turn Mic On/Off
- ✓ Switch Day/Night View
- ✓ Initiate Recording
- ✓ Tag Video

ACTIVE WIRELESS STREAMING

Live remote viewing is a powerful tool because now command staff can “be there” with their officers in the field, backing them up with on-the-spot decisions. But, if an officer’s safety is in jeopardy or he has moved outside of the camera field, command staff are often at the mercy of whatever view was being broadcast at the time contact was lost, and have no power to operate the system remotely to get the vital information they need to act immediately.

This is exactly where DigitalPatroller breaks ahead of the pack. The system’s wireless solution allows command staff ***the same level of control that the officer has in his car.*** This means a dispatcher or supervisor can switch from front to rear-seat cameras, turn on the rear seat mic, switch between night and day views, zoom in or out, scroll through metadata information, initiate recording, tag video with metadata, playback video to review specific frames, or any other function the officer has access to from his car.

Every function is user-configurable, so dispatch or command staff can be given as little or as much control as the agency warrants. For maximum flexibility, DigitalPatroller operates via both 802.x technology and standard cellular networks (via wireless data modem).

With DigitalPatroller, the command center itself can become mobile with no compromise in functionality. Our wireless solution allows for user-configurable frame rates to capture the highest quality and most dependable video stream – another key distinction between Integrian and other solution providers.
