

INTEGRIAN®

MOBILE DIGITAL VIDEO

Integrian is a pioneer of complete video management solutions that include ruggedized mobile digital video technology. Our surveillance systems are known for their reliability and accuracy particularly in harsh, mobile environments. Police agencies, transportation authorities and others depend on our technology to support mission-critical operations and to provide tough protection against frivolous lawsuits, vandalism and security threats.

Connecting Integrian's in-vehicle camera systems is a complete software application suite that includes innovative technologies for enhancing and managing video evidence. Integrated fixed-mobile camera systems, scene tracking, advanced analytics and more are keeping pace with increasing global requirements, and setting new standards for security in public safety, transportation and government.

INTEGRIAN® PRODUCT MIX

DigitalPatroller® is developed specifically for the needs of police and other public safety organizations. From routine car stops to event management and response, DigitalPatroller captures critical evidence with the toughest, most dependable digital video system on the market. Unique features enable 4-camera simultaneous recording, live remote viewing over wired and wireless networks, configurable resolution and more. In development: Automatic License Plate Recognition. Integrian's solution will provide an integrated camera and processing unit with up to 8GB of internal flash memory and Active Learning for new states and plates. Ask your sales representative for more details on this emerging technology. **See www.digitalpatroller.com.**

TransitCam® video surveillance systems have been designed to the most demanding standards in the transit industry. Our products are installed in some of the country's largest properties including MTA New York City Transit, New Jersey Transit and San Diego Transit. Highly scalable, TransitCam is ideal for both new builds and retrofit projects. **See www.transitcam.com.**

TotalView™ is a comprehensive back-end video data management system. While both fixed camera solutions and mobile video data are critical parts of the evidence chain, they don't tell the whole story until they become one seamless record. With TotalView police agencies can track an arrest from the first field encounter through transportation, booking, interrogation and holding. Transit authorities can track suspicious activity from the platform onto the bus or train, uninterrupted. **See www.integrian.com.**

Analytic Intelligence (AI)™ refers to adaptive video systems with a focus on intelligence, surveillance, and reconnaissance (ISR). The adaptive system is applicable for ISR in general environments, addressing base and port security, as well as urban and suburban sensing during wartime, peace-keeping, and homeland security missions. Of significant importance for current and anticipated DoD activities, the system focuses on recognizing unusual behavior or activities. Integrian's AI capabilities include dynamic video object tracking, feature analysis, statistical characterization of object behavior, and collaborative risk-optimized multi-sensor management. **See www.integrian.com.**
