# Passenger Information System

Integrian is a leading supplier of transit information technology for communications, surveillance and passenger information applications. With over 1000 systems installed in the Australian and European markets, the company supplies systems for demanding high profile security environments such as the London Underground, Heathrow Express and Madrid Suburban transit networks.

## INTEGRAN TRANSIT INFORMATION SOLUTIONS:

- ✓ Passenger Information Systems (PIS)
- ✓ Passenger CCTV surveillance and infotainment systems
- ✓ Transit position tracking systems
- ✓ Train event & accident recorders
- ✓ On-board communication solutions
- ✓ Off-board wireless solutions
- ✓ Back office management software

An end-to-end engineering approach allows the seamless transfer of video or data to and from operation centers. Integrian offers its own back office software applications, as well as interfaces to existing back office applications.

## Protection in motion

Integrian's capabilities cover design, development, manufacture, project management, installation and service of transit information technology solutions. To ensure our systems' functional reliably in harsh public transport environments, we test our products in-house for:

- ✓ Electromagnetic interference (EMI)
- ✓ Electromagnetic compatibility (EMC)
- ✓ Vibration
- ✓ Humidity & temperature

Integrian systems satisfy a range of rail vehicle, public engineering and safety standards; our Melbourne facility is ISO-9001 certified.

Integrian systems are designed around a scalable digital system design where components can be added or upgraded in the future. These systems have a high degree of software functionality. This approach allows system upgrades to be implemented quickly and allows the equipment to support customer requirements through the life of the system.
