## San Diego Metropolitan Transit System

### ON-BOARD VIDEO SURVEILLANCE PROJECT SUMMARY

San Diego Metropolitan Transit System (SDMTS) has partnered with Integrian, Inc. to install video surveillance systems onboard the agency's buses and trolleys. The program is defined in three phases and includes options for future expansion contingent on funding availability.

#### PHASE I

Pilot of 2 buses and 2 trolley vehicles: completed Fall 2007.

#### PHASE II

Installation on 80 buses, target completion Summer 2008.

#### PHASE III

Retrofit installation of up to 221 buses and 9 trolley vehicles, to begin Fall 2008. In addition to the retrofits, SDMTS has contracted with New Flyer Industries to build 62 new buses in 2008, and up to 200 additional buses over the next 4 years, all of which will have Integrian video systems installed.

**TRANSITCAM®**

MOBILE DIGITAL VIDEO

**Forward View Camera**

- ✓ “sees” if the bus gets cut off by another vehicle
- ✓ monitors grade level crossings and intersection safety
- ✓ records traffic density and other environmental conditions

**Curb View Camera**

- ✓ monitors passenger entrance/exits
- ✓ provides peripheral monitoring as bus turns corners, etc.

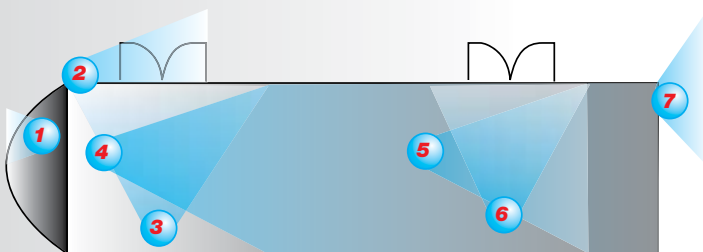

**Rear View Camera**

- ✓ helps prevent rear-end collisions
- ✓ monitors other exterior events

**Four interior cameras:**

2 near the front and 2 near the back

**Camera Placement**

*“From a risk management standpoint, surveillance video provides crucial documentation of what did happen if someone files a complaint.”*

*Tom DeLuca, Director of Maintenance for the San Diego Metropolitan Transit System.*

**ABOUT SDMTS**

The Metropolitan Transit System provides bus and rail services directly or by contract with public or private operators. MTS determines the routing, stops, frequency of service and hour of operation for its existing services. The organization is responsible for the service planning, scheduling and performance monitoring of all MTS transit services.
